It was a dark and stormy evening one night just recently. I was at a friend's house. (My friend and I were truly enjoying the evening together, I might add). The storm was quickly worsening as the wind had REALLY started to pick up. Fortunately I had my XM SATELLITE RADIO with me. I aimed the antenna southward. I then hit the power button and turned it on. I then very quickly turned to the DETROIT station, which by the way, is a 24 hour INSTANT TRAFFIC AND WEATHER station. They then announced that there was a tornado touch down that was literally only 10 miles from where my friend's house is, and was heading in the the very direction of my friend's house. With my precious, valuable XM in my hand, my friend and I immediately headed down stairs, and took shelter. All of a sudden, everything went totally quiet. Suddenly, with the sound of a VERY HUGE locomotive just ROARING right through the living room of my friend's house, and the sound of breaking glass, just SHATTERING and going all over the place, the very same tornado that they were talking about on XM had struck. That night, my XM SATELLITE RADIO SAVED THE LIVES OF MY FRIEND' HIS DOG, AND I. Now, try getting that from any FM radio station, in which by the way, only does the weather reports every half hour, or what ever. If XM,s saved my life, than they're saving many other lives as well. Finally, I will ask you to please reject NAB's petition 04-160. As well, I ask you to support XM SATELLITE RADIO TO THE FULLEST. THANK YOU, AND HAVE A GREAT DAY.
